

Supplementary Fig. 3. Intact oxidative stress defense enzymes in *NF1* mutants. **a. & b.** Total and mitochondrial superoxide dismutase (MnSOD) and catalase activities were similar between *NF1* mutant and control mitochondria, mean \pm SD of 4 experiments, 400 flies per genotype ($P = 0.32$ for total SOD; $P = 0.98$ for MnSOD, t - test; $P = 0.64$ for catalase).
